Skin*fill*TM **BIANCO**

WHERE **LIGHT IS DELIVERED**
NOT JUST APPLIED

DOUBLE VESICLE
TECHNOLOGY

INTELLIGENT LIGHTENING SYSTEM

PIGMENTATION IS BORN AND BECOMES VISIBLE ACROSS THE DIFFERENT LAYERS OF THE SKIN
SKINFILL BIANCO INFLUENCES PIGMENT PRODUCTION AND TRANSFER ACROSS SKIN LAYERS

ELEVATOR DELIVERY SYSTEM

A breakthrough vertical transport, ectosomes carry and progressively release active payloads through the epidermal layers; exosomes provide a biological regulatory signal to limit melanosome transfer and tyrosinase activity. Together they form a coordinated, multi-level corrective system.

TWO BIOLOGICAL MESSENGERS. ONE INTELLIGENT DELIVERY.

ECTOSOMES: large vesicles that transport nano-encapsulated actives in a controlled, sequential release “elevator” effect.

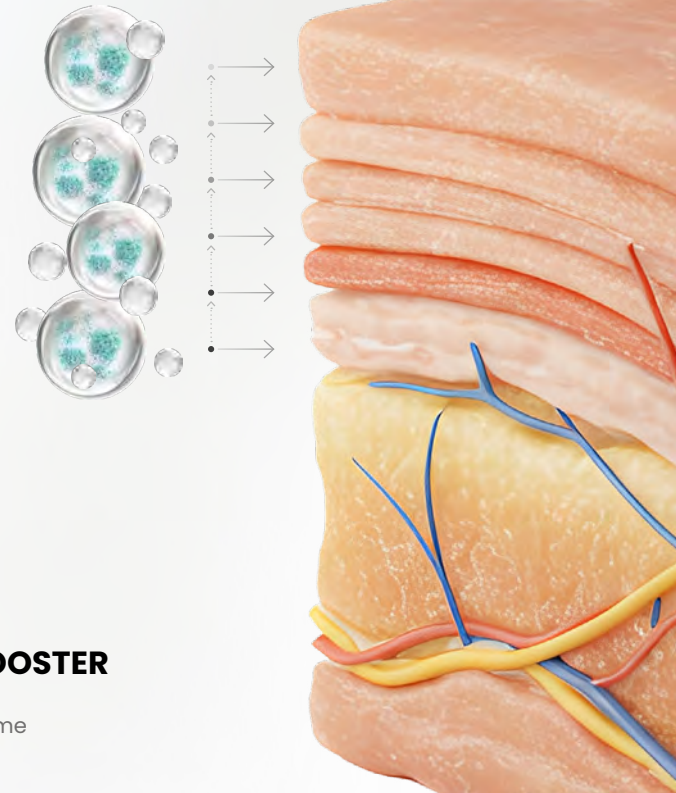

EXOSOMES: bioengineered vesicles (produced from lactobacilli cultures) that modulate cellular dialogue between melanocytes and keratinocytes, down-regulating pigment transfer.

Why vertical delivery matters

- Converts passive diffusion into guided, layer-specific dosing
- Each skin layer receives the right active at the right depth
predictable, reproducible outcomes
- Reduces off-target dispersion and variability of results

NOT JUST LIGHTENING, A **CURATIVE AND PREVENTIVE BOOSTER**
THAT **RE-EDUCATES MELANOGENESIS**

Restoring physiological pigment production and improving tone stability over time

PRECISION BIOLOGY. VERTICAL CONTROL

Skinfill Bianco acts where pigmentation originates, delivering actives layer by layer through an organized, vertical system.

TARGETED BIOLOGICAL ACTION

- **Basal layer:** inhibition of melanogenesis
- **Spinous layers:** reduced melanosome transfer
- **Superficial layers:** antioxidant protection and tone uniformity

Not just depigmentation. A curative and preventive booster that re-educates the skin to produce color correctly.

ACTIVE MATRIX CORE COMPONENTS

- **Linear Hyaluronic Acid:** multi-molecular weight, structural support, vertical diffusion, inflammation modulation
- **Polynucleotides:** cellular repair and metabolic support
- **Tranexamic Acid:** control of post-inflammatory melanocyte activation
- **EGCG, Arbutin, Glutathione:** antioxidant, anti-melanogenic, redox balance
- **Niacinamide B3:** reduced melanosome transfer, barrier reinforcement
- **Biomimetic peptides:** melanogenesis regulation

INDICATIONS

- Melasma • Solar lentigo • PIH • Uneven tone
- Photoaging with pigment component

2 syringes × 2 ml per box
