The new Biostructuring Hyaluronic Acid,
with stabilized molecular complexes

PROMOITALIA
MEDICAL AESTHETICS

PROMOITALIA
MEDICAL AESTHETICS

Δ mixture of three molecular aggregates, stabilized through an innovative technological hybridization process, to guarantee an immediate and lasting effect.

3 molecular weights for 3 effects:

- High molecular weight (2,300,000 Daltons) for a luminous moisturizing effect
- Medium molecular weight (200,000 Daltons) for an intensive bio-restructuring effect
- Low molecular weight (50,000 Daltons) for a deep stimulating effect

A new technology for the production of an innovative, unique and one-of-a kind product. Long-lasting bio-restructuring: The molecular complexes resist the endogenous enzymatic attack ensuring greater efficacy than usual linear hyaluronic acid products. Extraordinary tissue diffusion: thanks to its low density, the product leaves no unsightly signs after its use. Extreme tolerability: a pure product without synthetic additives or cross-linkers.

***Ellipse Technique** is the application technique that allows to obtain an optimal result by applying the product with the supplied roller.*
